**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ferstenberg et al in view of Abu El Ata.

Ferstenberg et al discloses a method of matching orders for a user by computer according to an evaluation heuristic (col 22, lines 62-67; col23, lines 1-23). A time is scheduled to execute the evaluation which is then executed (col 23, line 3). An order message is created via a computer network for communication to a transaction destination if the evaluation heuristic matches the order (col 23, lines 35-46). The steps are repeated until the order is fulfilled.

Ferstenberg et al does not disclose selecting an evaluation heuristic (and user interface for selecting the heuristic).

Abu El Ata discloses selecting an evaluation heuristic (col 1, lines 45-67; col 2, lines 1-67).

It would have been obvious to one with ordinary skill in the art to include selecting an evaluation heuristic ( and a user interface) to Ferstenberg et al because of

what is taught by Abu El Ata. Abu El Ata teaches that modeling is important to database application types (col 1, lines 50-52). Both Ferstenberg et al and Abu El Ata are concerned with order matching.

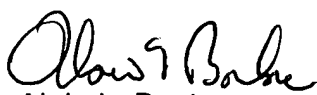

**Conclusion**

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. O'Leary et al, Peckover, Lupien et al (266), Korhammer et al, Lupien et al (652), Kalmus et al, Adams et al,
